EDUCATION

University of Melbourne

Melbourne, VIC

Bachelor of Science, Computer Science

- Enrolled in courses relevant to **Finance**, **Data Science** and **AI**

EXPERIENCE

Software Engineer

July 2025 - Nov 2025

FSR Consulting

Melbourne, VIC

- Built a frame-by-frame deepfake detection pipeline, enabling forensic analysis of altered media for client's analysis
- Developed a full-stack Flask & React application for synthetic media detection, delivering a production-ready tool
- Reduced manual evidence preparation time through structured metadata validation design and a automated JSON-to-PDF forensic report summary
- Accelerated environment setup and reproducibility improvement through Docker-based deployment and relevant tech-stack discussions
- Ensured successful deployment through client communication, translating their requirements into features

Student Leader

March 2025 - July 2025

Lisa Bellear House

Melbourne, VIC

- Created a welcoming and inclusive community for new residents through tours and events
- Photographed and promoted dorm activities to encourage engagement and representation
- Collaborated with peers and staff to develop initiatives supporting student wellbeing

PROJECTS

CubeTimr | *React, TypeScript, ManifestV3, Tailwind*

May 2026

- Built and published a cross-browser extension for Chrome and Firefox using React, TypeScript, and Vite
- Persisted user data across sessions via chrome.storage.local, ensuring state integrity on popup lifecycle events
- Drove real-time UI updates at 60fps using requestAnimationFrame, eliminating timer drift caused by setInterval throttling

Personal Portfolio | *React, TypeScript XML, Tailwind CSS*

Feb 2026 – April 2026

- Building a Minecraft themed React webpage with an interactive terminal-based interface
- Utilising **software modeling principles** such as **Builder** and **Factory** pattern for efficient project development

Chef's Surprise | *JavaScript, CSS, RestAPIs*

Jan 2025 - Feb 2025

- Developed a recipe generator integrating external APIs with cuisine filtering and dynamic instructions
- Reduced API response time by optimising request handling and eliminating redundant calls
- Increased average session duration through interactive UI animations and improved UX flow

Socio-Economic Crime Analysis | *pandas, seaborn, regex, matplotlib*

Sep 2024 - Oct 2024

- Analysed 10,000-row socio-economic dataset to identify correlations between economic indicators and suburb offence rates
- Utilised KNN and logistic regression models achieving high prediction accuracy while reducing false positives
- Improved preprocessing efficiency using regex-based cleaning and imputation techniques, accelerating model training

Shadow Mario | *Java, Bagel*

April 2024 - May 2024

- Developed a 2D platformer using object-oriented design principles, implementing modular player, enemy, and physics systems
- Designed extensible class architecture to support scalable game entity behaviour

TECHNICAL SKILLS

Programming: Python, C/C++, Rust, Java, SQL, JavaScript, TypeScript

Frameworks & Libraries: React, Flask, Node.js, FastAPI, Pandas, Scikit-learn, PostgreSQL, SQLite, Matplotlib

Data & AI: Machine Learning, Deep Learning, CNNs, Autoencoders, Transformers, Anomaly Detection

Tools: AWS, Docker, Git, GitHub, OpenAI API, REST APIs, Streamlit, Vercel, CloudFlare

Languages: English, Chinese, Hindi, Sindhi
